

# 9'-0" Drive Thru Clearance Bar

Designed for your drive thru application

## QSRCB11

The PDG QSRCB-11 is made for the QSR industry and is meant to protect your drive thru from oversized vehicles. The clearance bar is wind load rated up to 140 mph.

The clearance bar is shipped knocked down and then is assembled in the field. The chains are adjustable in order to achieve the proper clearance height. The bump bar swings out of the way when hit which will minimize any damage to the vehicle and the clearance bar.

Constructed using high impact steel braces and 1/8" thick walled tubing which will ensure longevity and years of use. This clearance bar is first primed with a zinc rich primer and can be painted virtually any color you want.
